GUIDE TO
ARCHAEOLOGY & PALEONTOLOGY

MUSEUM @ BLACK HILLS INSTITUTE

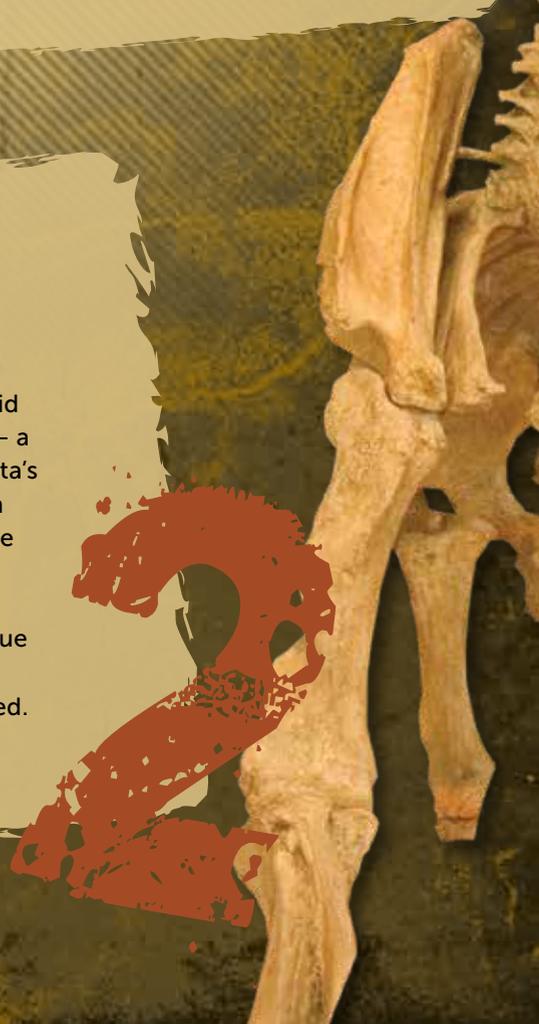

The Museum @ Black Hills Institute features the world-renowned Black Hills Institute collection. The main floor is a panorama of ancient skeletons, the star of which is "STAN," one of the most complete *Tyrannosaurus rex* specimens ever found. Display cases filled with fossil vertebrates (dinosaurs, mammals, reptiles, birds and fish), invertebrates (cephalopods, trilobites, crinoids, pelecypods and gastropods), and plants create the perfect backdrop. And for the history enthusiast, signboards with area (mineral, mining and fossil collecting) history, including historic maps and pictures, are also on display. Please enter the museum through the "Everything Prehistoric" gift shop. Admission: \$7.50 – adults, \$4 – Youth (6 to 15), \$6 – Veterans, Active Military and Seniors (60+), Free – Children 5 and under.

THE JOURNEY MUSEUM & LEARNING CENTER

Take an incredible trek through time at The Journey Museum in Rapid City. Visitors begin their "Journey" 2.5 billion years ago in the abyss – a period of unrecorded time – and then continue to trace South Dakota's history with exhibits on rock formations, dinosaurs, Native American cultures, pioneers and modern history. The earliest records of people in the Black Hills date to 12,000 years ago; see the archaeological evidence in exhibits by the South Dakota Archaeological Research Center on display in the museum. Interactive exhibits provide a unique hands-on learning experience. Children of all ages can learn by exploring in the dig box and at the activity table. Admission is charged.

MUSEUM OF GEOLOGY

The Museum of Geology, located on the South Dakota School of Mines and Technology campus in Rapid City, is a leader in conserving the rich geologic heritage of South Dakota and the Black Hills by collecting, researching and housing its unique and often rare resources. Scientists at the Museum have utilized their extensive field experience to collect more than 500,000 specimens of fossils, rocks and minerals, providing a vivid impression of Dakota life in prehistoric times. Extensive exhibits focus on paleontology – including mounted skeletons of dinosaurs, mammals, White River Badlands fossils, marine reptiles and fish – and mineralogy – including the Hall of South Dakota Minerals, meteorites, replicas of historic gold nuggets, and a fluorescent mineral room. The Kids' Zone offers hands-on experiences for young visitors. Admission is free. Open all year round, call for hours.

THE MAMMOTH SITE®

The simple act of getting a drink of water, as well as the lush grass around the sinkhole, led to the deaths of hundreds of animals 26,000 years ago at what is now The Mammoth Site® in Hot Springs. After they entered the spring-fed sinkhole to drink and bathe, the mammoths were unable to climb back up the slippery banks; they became trapped, ultimately starving to death. Since 1974, 58 Columbian and three woolly mammoths have been unearthed, making this the first site where both species have been found together. Eighty-five species of ice-age animals have been discovered, including camel, llama, giant short-faced bear, wolf, coyote, and prairie dog.

Visitors may tour the working dig and Ice Age exhibit in Hot Springs year-round. The Mammoth Site® conducts a four-week long excavation each summer which is divided into two 2-week sessions. Road Scholars will also be excavating at The Mammoth Site® in April and September.

The Mammoth Site® offers the Junior Paleontologist Program four times a day from June 1-July 31 and once a day from August 1-15. This simulated dig allows participants to dig for replicas of actual bones found at the site. Merit badges in geology for Boy and Girl Scouts are offered. In addition, the Advanced Paleontologist Program will be offered once a day from June 1-July 31 and once a day from August 1-15, and the Atlatl Throwing Experience will be offered once a day from June 1-July 31. Advanced registration is recommended for all education programs.

BADLANDS NATIONAL PARK

For more than 150 years, the area in and around Badlands National Park has been an important center for paleontological research. Some of the most spectacular fossil deposits in North America are found in this area. The rocks and fossils preserve evidence of ancient ecosystems and give scientists clues about how early animal species lived.

View fossil specimens at the Ben Reifel Visitor Center at Cedar Pass and hike the Fossil Exhibit Trail, which features fossil replicas and exhibits of now extinct creatures that once roamed the area. Visitors are encouraged to attend daily ranger programs, which are offered May 29-August 20. Fossil Talks and Junior Ranger programs are especially popular for families with children. Learn about the saber-toothed cat skull discovered in the summer of 2010 by a seven-year-old girl who was participating in a Junior Ranger Program. On June 6, 2016, the interpretive fossil preparation lab opens in the Ben Reifel Visitor Center. Lab hours are 9:00 AM to 4:30 PM seven days a week until September 16, 2016. Park entrance fee is required.

CULTURAL HERITAGE CENTER

Take a step back in time at the Cultural Heritage Center in Pierre and learn about the history behind the people who made South Dakota the diverse state it is today. The prehistoric and historic peoples of South Dakota are all around us, and they speak to us in different ways. Archaeologists learn about the past from the study of what people have thrown out or left behind, such as arrowheads and scrapers, animal bones, seeds and charcoal, pottery, storage pits, rock shelters, and root cellars. Our primary gallery features early People and their stories that come alive through hands-on exhibits and recordings of Native Americans speaking Dakota, Lakota and Nakota. Other displays in our galleries bring the story of Native Americans in South Dakota to the present day. Admission fees apply. Children 17 & under are free!

The Cultural Heritage Center also houses the State Archives, which is open to the public.

MITCHELL PREHISTORIC INDIAN VILLAGE

A tour of the Thomsen Center Archeodome reveals life in a 1,000-year-old village. Excavations at the Mitchell Prehistoric Indian Village site have uncovered evidence of everything from the food the villagers ate to the tools they used. At the newly renovated Boehnen Memorial Museum, there is an extensive exhibit, including a model of what the village may have looked like, as well as a life-sized reconstructed lodge. A team of students from the University of Exeter, England and Augustana University, Sioux Falls, will be on site beginning June 17 for about two weeks to continue excavating and mapping the site within the Archeodome. The dig takes place Monday through Saturday each week and the public is invited to observe and learn more about the excitement of archaeological discovery. There will be an archaeologist on staff from Memorial Day to Labor Day. Archaeology Awareness Days are July 2 & 3. Admission is charged.

CHILDREN'S MUSEUM OF SOUTH DAKOTA DINO DIG

At the Dino Dig, visitors conduct their own excavations and unearth dinosaur bones that could be found on a South Dakota farm.

The Dino Dig inspires and stimulates children's interest in paleontology and archaeology. They'll share the awe of discovery as they view Mama, a life-sized animatronic T. rex that stands 25 feet tall and 60 feet long. Visitors may peek around a corner and coax baby Max T. rex out of his habitat, but they must be careful not to wake Mama!

Making comparisons using math skills, children will develop an appreciation for the size of a dinosaur versus other animals and buildings. Admission is charged.

KIRBY SCIENCE DISCOVERY CENTER AT THE WASHINGTON PAVILION

Explore the world of dinosaurs and learn about the dynamic environment in which they lived. Meet Stan, a full-sized replica of a Tyrannosaurus rex found in western South Dakota. Visitors may excavate dinosaur bone replicas at the dino dig table, touch a real dinosaur bone, and view a fossilized dinosaur egg. Trained staff lead daily demonstrations featuring dinosaur fossils, scat and tracks, and adult dinosaurs and their babies that once roamed South Dakota. Admission is charged and includes access to more than 100 hands-on science exhibits.
